

Technology at the service of everyone

“It is the opportunity to face different challenges on a daily basis, different projects, with the greatest personal freedom to decide which way to take to solve the problems, and proceed in the development of solutions in a very comfortable working environment made by friends more than colleagues.

The TLS incubator was the perfect setting for us to grow a reality at the beginning smaller than the present, representing an opportunity for communication and integration with other actors in this domain, giving us visibility that we would hardly have had outside of this context and objectively representing a unique physical space in which, beyond the services offered to us, there is actually a growth potential with greater visibility.

In the domain of life sciences, the company is active with two different production lines: clinical risk management and telemonitoring of vital parameters. Regarding the management of clinical risk, the company distributes on the national territory an innovative solution for the secure identification of patients; so we basically talk about identification bracelets with a distinct characterization compared to current market solutions thanks to the ability to print the bracelet using ink jet printers. As regards vital parameters' telemonitoring, the company has developed a stand-alone solution, an all-in service platform called HappyMed, which is a real-life mobile diagnostic corner. HappyMed today is a solution that enables vital parameters to be captured by a number of certified electromedical devices, the real-time transmission of this data to a general practitioner or to a specialist who cares for the patient, and the automatic management of a whole series of events, alert, linked to any abnormal variation of the vital parameters of the individual patient.

I a few years time I see myself still working for T4All which in the mean time I hope it has become an even bigger reality and capable of making even bigger projects”.

Filippo Salvini, software development T4All
