TOSCANA LIFE SCIENCES

NUMBERS OF A VALUE GENERATING INNOVATION ECOSYSTEM

Toscana Life Sciences is a non-profit organization active in supporting research activities and promoting the creation of innovative companies in the Life Sciences field. Founded at the instigation of Tuscany's principal university, clinical, industrial and financial institutions, the Foundation is based in Siena, in the historical "Torre Fiorentina" area, where Achille Sclavo founded the eponymous Istituto Sieroterapico e Vaccinogeno Toscano in 1904, and where important multinational vaccine companies now strategically choose to locate their primary research and development activities. An environment of excellence that is part of a regional panorama in which the Life Sciences play a strategic role.

MORE THAN **8.5 MILLION EUROS** GENERATED AND ATTRACTED **IN 2020**

TLS keeps on growing and maintains its key position as investments and projects attractor in the life sciences sector. More than 8.5 Million euros has been generated and attracted to the regional territory by TLS. From 2007 TLS Foundation has been able to generate activities and investments for more than 62 Million euros.

MORE THAN **3 MILLION EUROS** OF **INCOME FROM INCUBATION** **ACTIVITIES AND SERVICES**

In 2020 TLS income from incubation activities and services was more than 3 M, with an increase of 6.3% with respect to last year.

+6.3%
INCREASING

EMPLOYMENT INCREASE + 17.8%

Employment increased by 17.8% in 2020. We have in fact 66 employees working for the Foundation for a total of 456 employees with companies and research groups incubated and affiliated to TLS.

+450
EMPLOYEES

The performance indicators are referred to the 2020 fiscal year profit

GIVE SPACE
TO YOUR RESEARCH

GIVE SPACE TO YOUR RESEARCH

ARE YOU LOOKING FOR **SPACES** FOR YOUR **ACTIVITIES**?

TLS offers more than 4,000 sqm of laboratories in modules ranging from 15 to 150 sqm.

LABORATORIES AND **SPACES** OF **COWORKING**

- Equipped laboratories •
- Offices •
- Meeting rooms •
- Auditorium •

FROM THE CONTAMINATION OF **IDEAS** TO FUTURE **BUILDING**

All our spaces are realised to allow cross-contamination and the interchange among employees of different companies.
A dynamic environment where to grow ideas for the future.

CONTACTS

Cristina Tinti

For more information:
www.toscanalifesciences.org/en/services/incubation-services/

RESEARCH SERVICES

HIGH **TECHNOLOGY** AT THE SERVICE OF **RESEARCH**

In TLS all research groups, start-up, spin-off and companies can find technology facilities and services to grow up and face the market challenge.

ENTERPRISE ACCELERATOR BUT NOT ONLY

- Access to technology instruments and platforms
- Molecular profiling
- Validation and setting up of analytic methods
- In vitro and in vivo biological tests

Do you need instruments and platforms with a high added value? TLS offers different exclusive use instruments at competitive prices as compared with the market standards.

CONTACTS

Laura Salvini
l.salvini@toscanalifesciences.org

For more information:
www.toscanalifesciences.org/en/services/research-services/

BUSINESS DEVELOPMENT

TAKE A **GOOD IDEA** AND TURN IT INTO **BUSINESS**

We are enterprise facilitator and accelerator. Thanks to different services and consultancies TLS supports start-up, companies and young people with interesting ideas in finding a steady place in the market.

- Support to start-up to plan and to accelerate the development process
- Licence agreements, research and business opportunity selection
- Support to companies to gather the most interesting business opportunities
- Research and orientation activities to gather national and international funding opportunities

INTELLECTUAL PROPERTY PROTECTION

TO HAVE A **GOOD IDEA** IS NOT ENOUGH,
IT MUST **BE DEFENDED**

TLS offers intellectual property consultancy in order to protect products' and services' value.

The best defence is the attack. When we talk about Intellectual Property the defence is never enough. For this reason we also offer support services to prepare and to present patent applications.

TLS RESEARCH ACTIVITY

TUMOUR IMMUNOLOGY UNIT

Established with the support of MY FIRST AIRC GRANT (Italian Association for Cancer Research, AIRC)

GENERAL DESCRIPTION

Tumour Immunology Unit was opened in 2019 owing to the support of the special AIRC program that helps young researchers in establishing independent laboratories. My First AIRC project “Dissecting ILT3 biology to understand tumor suppression in B cell chronic lymphocytic leukemia”, hosted in TLS lab in Siena, is conducted by Anna Kabanova as Principal Investigator (PI).

RESEARCH ACTIVITIES

The research project aims to get a deeper understanding of the mechanism ensuring that some tumours are slower in development than others and to harness this knowledge for therapy development. Specifically, we are interested in studying one of the most frequent tumours of B lymphocytes, B-cell chronic lymphocytic leukemia (CLL), which is characterized by high incidence of indolent disease. This interesting observation suggests an existence of a molecular network actively suppressing tumour progression in CLL. Our knowledge on this network and its regulation is relatively fragmentary, hence we would like to fill in this scientific gap. This could be eventually useful for the discovery of novel therapeutic targets to treat B cell tumours.

Our laboratory combines state-of-the-art imaging, signaling studies, -omics technologies and gene editing approaches in vitro and in vivo to tackle two specific questions. First, we would to understand better the signaling network of regulatory membrane receptors expressed on B cells from CLL patients in order to characterize their functional role in CLL pathogenesis. Second, we are particularly interested in characterizing CLL-specific tumour suppressing gene networks that counteract tumour development in indolent

forms of CLL. This study may form a rationale for the development of novel therapeutic approaches to treat aggressive CLL.

AIRC GRANT

Duration: 5 years
Start date: July 2019
Amount: 500.000 Euros

VACCIBIOME PROJECT

ERC advanced grant - “Cancer Vaccines and Gut Microbiome: an Integrated Approach to Optimize Cancer Immunotherapy”

GENERAL DESCRIPTION

The project aims at investigating the role of gut microbiome in determining the efficacy of cancer vaccines. The research project, awarded to Prof. Guido Grandi, University of Trento, has a term of five years and benefits from 2,5 million Euros of funding. TLS hosts some labs and scientists and contributes to the development novel cancer vaccines and the analysis of immune responses in different animal models.

RESEARCH ACTIVITIES

The project intends to shed light on the interplay between cancer immunity and gut microbiome as a way to optimize personalized cancer vaccines and immunotherapy. The project originates from two milestone discoveries. First, to be effective cancer immunotherapies have to target CD4+/CD8+ T cell neo-epitopes, which originate from tumour mutations. Second, the gut microbiome influences the effectiveness of anti-PD-1/PD-L1 antibody immunotherapy both in animal models and in humans. We also recently showed in a mouse model that oral gavages with Bifidobacterial cocktails improved the therapeutic power of neo-epitope-based cancer vaccines. How microbiome affects anti-cancer immunity has not been fully elucidated yet and a deep understanding of the underlying mechanisms has the potential to substantially improved cancer immunotherapy. The ultimate goals are: 1) to provide new criteria for neo-epitope selection in personalized cancer vaccines, 2) to develop prognostic tools based on microbiome analysis, and 3) to define microbial species to be used as immune-potentiators in patients undergoing cancer therapy.

EUROPEAN GRANT

Duration: 5 years
Starting date: September 2019
Total amount: 2,5 Million Euros

Monoclonal Antibody Discovery (MAD) LAB

The **MAD Lab research** team at TLS Foundation started activities in 2018 thanks to a 2.5 million euros ERC Advanced Grant focused on anti-microbial resistance and has grown quickly thanks to various funding sources received for tackling different health challenges (*Shigella*, *Klebsiella pneumoniae* and, more recently, coronavirus SARS-CoV-2). The Lab has consolidated skills in **the identification and production of monoclonal antibodies that can be tested *in vitro* against bacteria and viruses.**

GENERAL DESCRIPTION

The MAD Lab is focused on different research projects:

1) ERC vAMRes (Vaccines as a remedy against Anti-Microbial Resistance) Project - “Isolation and screening of human monoclonal antibodies against AMR for therapy and for discovery of novel vaccine antigens” aims, through isolation of natural antibodies and identification of the recognised antigens, at developing vaccines able to defeat *Neisseria gonorrhoeae* (Gonococcus) and *Escherichia coli* pathogenic strains, thanks to the application of advanced technologies to Reverse Vaccinology developed by Dr. Rino Rappuoli (Principal Investigator of the vAMRes Project) at the end of ‘90s and now proposed again with a 2.0 approach.

ERC EUROPEAN GRANT - Duration: 5 years; Starting date: November 2018; Amount: 2.5 Million Euros.

2) ShiMabs Project - “Human monoclonal antibodies against *Shigella* (ShiMabs), for therapy and vaccine acceleration” aims at isolating therapeutic monoclonal antibodies against different strains of *Shigella*, a bacterium responsible for bowel infections, especially in children in the poorest areas of the world.

WELLCOME TRUST GRANT - Duration: 3 years; Starting date: March 2021; Amount: more than 4 million Euros.

3) MabCo19 Project, started in collaboration with INMI Spallanzani, is focused on the discovery and development of human monoclonal antibodies against coronavirus SARS-CoV-2, from blood of recovering/recovered patients, with the aim of using them for prophylactic/therapeutic purposes and as molecular baits for the discovery of vaccine antigens. The experimental approach followed is called Reverse Vaccinology 2.0, which represents the evolution of the first Reverse Vaccinology strategy optimized by Dr. Rino Rappuoli. **FUNDS:** started in March 2020, within the C.Re.Me.P. (Regional Centre for Precision Medicine) Project funded by the Tuscany Region and funds from AchilleS Vaccines under the EU Malaria Fund.

4) New Delhi metallo-beta-lactamase-producing (NDM) *Klebsiella pneumoniae*. The project deals with the isolation of human monoclonal antibodies from patients who recovered from NDM-producing *K. pneumoniae* infection and, by using an innovative high-throughput imaging platform and deep learning algorithms for image analysis, characterize thousands of mAbs to find the most potent ones. The overarching goal of this project is to identify broadly protective mAbs against highly virulent *K. pneumoniae* strains, thus providing a therapeutic solution to NDM *K. pneumoniae* infections.

C.Re.Me.P Funds (Tuscany Region) - Duration: 2 years; Starting date: December 2019.

EDUCATION AND
HIGH QUALIFIED SKILLS
IN THE LIFE SCIENCES

VITA FOUNDATION

“NEW TECHNOLOGIES FOR LIFE” TECHNICAL VOCATIONAL SCHOOL

The “New technologies for Life” Technical Vocational School [Istituto Tecnico Superiore (ITS) “Nuove tecnologie per la Vita”] was created to train highly specialized professional figures in a strategic sector of the regional economy, the Life Sciences. The objective of the ITS, which operates throughout the entire Tuscany region, is to fulfill the demand of companies with new high-level technical and technological expertise in a sector that sees Tuscany among the top three Italian regions in terms of the presence of companies and employees as well as turnover.

The “New technologies for Life” ITS Foundation, specifically, is led by the ITIS “Sarroccchi” in Siena and counts 21 partners including the TLS Foundation (coordinator), the Tuscan Universities of Siena, Pisa and Florence, the provinces of Siena and Pisa, the municipality of Siena, the metropolitan city of Florence, the “Cellini” Institute of Florence, the industrial associations of Florence and southern Tuscany, and the training agencies Toscana Formazione, ASEV, Confindustria Toscana Servizi and Pon-Tech. Several leading companies in the Tuscan chemical, pharmaceutical and biomedical sector are among the companies directly involved in the Foundation and strategic for the training outcomes of the TVS: GSK, Menarini, Kedrion, Corima, and Dekam E.L.A.

ACTIVITY

The “Life” Technical Vocational School [ITS “Vita”] offers young high school graduates two-year courses (for a total of 1,800/2,000 hours) constructed on the basis of the needs and requirements of companies: at least 30% of the duration of the training course is performed at a company, internships abroad are promoted and at least 50% of the faculty comes from the professional world. The courses will be developed in three areas of the Tuscan production chain: industrial and environmental biotechnologies, the production of diagnostic and biomedical equipment and devices, and medical nanotechnologies.

Furthermore, the ITS VITA Foundation offers short courses of high-level specialization (for a total of 600/800 hours) focused on life sciences such as: clinical studies project management; Informatics 4.0 (medical area); Pharmaceutical products commercialisation.

CERTIFICATIONS

The “New technologies for Life” Technical Vocational School is certified from M.I.U.R. for the teacher training and for the high school graduation (V EQF Level) and from Regione Toscana, (d.G. n. 1407/2016), as training agency. Fondazione Vita has the Certification of quality management system ISO 9001/2015. Finally Fondazione Vita is a partner of excellence Center for Advanced Robotics and enabling digital Technologies & Systems 4.0 - ARTES 4.0.

V.I.T.A. LAB

VIRTUAL INTERACTION FOR TRAINING AND ANALYSIS LAB.

V.I.T.A. Lab, is a laboratory of virtual and augmented reality, born through a project of the Tuscany Region to strengthen the ITS laboratories, with the participation of VITA Foundation, Toscana Life Sciences Foundation and the University of Siena.

The purpose of V.I.T.A. Lab is to train the technicians of the future (in particular in life sciences sector), through high-tech instruments, software applications and immersive reality technology to interact in a simulated environment, in total safety, and to induce a Learning by Doing process, a professionalizing training activity to train technicians with Industry 4.0 approach.

The added value of the VITA Lab method is the use of a 3D scanner that allows the virtualization of work environments, training and qualifying the operators and technicians of companies within the environments in which they will operate and allowing them to directly make an immersive experience as reality.

VITA Lab has the potential to innovate the training approach following the needs of the companies of the future.

THE BIO-INCUBATOR

THE BIO-INCUBATOR

Nowadays the TLS bio-incubator hosts 49 different tenants:
24 companies focused on R&D and services;
11 public or private research groups or foundations;
14 affiliated companies.

49
TENANTS

ECOSYSTEM

Increasing number of hosted companies: in 2020, 4 new tenants (incubated, affiliated companies and research groups) entered the TLS bio-incubator.

EMPLOYEES?
HIGH **QUALIFIED**
AND **FOCUSED** ON R&D

Of the 456 employees (TLS foundation and bioincubator), around 83% have at least a university degree and 42% are engaged in research and development.

SCIENTIFIC PUBLICATIONS

126 articles in 2020, 636 overall from 2007. Demonstrating the great commitment to R&D both for TLS Foundation and for companies and research groups.

126 NEW PUBLICATIONS

503

COLLABORATIONS AND LICENCE AGREEMENTS FROM 2007

A SOLID NETWORK OF COLLABORATION

Since 2007 incubated, affiliated companies and research groups have been able to sign 503 among collaborations and licence agreements with third parties at national and international level. 98 new collaborations and licence agreements in 2020.

PRODUCTS ON THE MARKET

136 are the products launched on the market since 2007. Most of them are diagnostic kits, ICT products and medical devices.

136 THE PRODUCTS LAUNCHED

GREAT RESULTS FOR OUR COMPANIES

Overall turnover by hosted companies and research centers exceeds 27.05 Million €, +59% over 2019. Investment attracted since 2007 are 104.8 Million.

27.05
MILLION TURNOVER

+59%

110
TIPOLOGY
OF SERVICES

AN ALWAYS BROADER SERVICE PORTFOLIO

Along with the increasing number of tenants, the service portfolio is evolving towards new fields like environment, clinical trials, serological tests, data management, mobile applications for medical care sector.

WHERE ARE INVESTMENTS COMING FROM?

The increasing trend of the turnover when compared to the overall investment attracted is confirmed for 2020. From the 35.8% of 2019 to 40.2% of 2020. The increasing is even more significant (45.2%) if we consider the overall investments attracted only by enterprises (84.8 M overall from 2007).

INCUBATED COMPANIES

FOCUSED ON RESEARCH AND SERVICES

AMBRA LIFE

In Ambra we support biodiversity, enhancing the variety and adaptability of cannabis. We want to preserve the natural harmony of the plant. We collaborate with farms in enhancing their quality control. Thanks to a process that combines new technologies and tradition, we transform Cannabis Sativa L. without using any solvent, keeping the phytocomplex and the natural ratio between cannabinoids unchanged.

ACTIVITY

We support farms, cultivators and retailers with fast and reliable analysis, customizable and solventless transformation process and a professional consultancy services. We produce both for third parties and for our branded products (the Amber selection), for which we follow the entire production chain, from seed to final oil, in collaboration with a scientific board specifically set up with the Italian company for medical hemp. We grow organically, synergistically, with integrated agriculture techniques and permaculture in Terre d'Ambra's farm.

TECHNOLOGY AND PATENTS

Our goal is a product containing the entire plant phytocomplex and naturally rich in CBD. We preserve the peculiarities of each flower to enhance the work before the transformation. The most significant steps to get to the final product are two: cold sieving of plant material and pressing of what's been collected. With Ambra we are trying to perfect this process to the maximum and we do it taking care of every detail. Inspirations come from science and tradition. The cold sieving process perfectly sums up this vision.

ACHILLES VACCINES S.R.L.

AchilleS Vaccines is a biotech company based in Siena (Italy) committed to designing novel products to tackle some of the most crucial health issues, including antibiotic resistance and emerging diseases. All with the aim of producing safe and potent vaccines in a sustainable and cost effective way. The company uses proprietary technological platforms, a vast network of international collaborative partners and forward-looking specialist expertise. AchilleS Vaccines is incubated in TLS since 2018.

ACTIVITY

The procedures and the employed working methods, also based on big data and deep learning approaches, as well as on cooperation with leading institutes and top-notch scientists in the field, assure very high level performances and a partial de-materialization and de-localization of development and production phases. All these aspects make the company able to nimbly face and adapt to market changes providing products “*faster, better and cheaper*”. At the moment Achilles Vaccines is developing some promising vaccines able to defeat some global health emergencies such as Covid-19 and never disappeared diseases such as malaria.

Products: Vaccines for new or emerging infectious diseases; Innovative vaccines to substitute sub-optimal existing ones; Vaccines against antimicrobial resistance; Pandemic monoclonal antibodies against infectious diseases.

TECHNOLOGY AND PATENTS

AchilleS Vaccines leverages on 3 technology platforms: **mOMV** - A platform which gives significant development advantages, including large-scale, cost effective production (very high process yield and very low COGS) in addition to a sophisticated molecular manipulation to display foreign antigens and a self adjuvanticity by inclusion of bacterial component. mOMV is tested in recent clinical trials and demonstrated good tolerability and high immunogenicity.

Lab 4.0 - An innovative Lab design assuring data quality and integrity, fully IoT integrated instruments, Big Data, Open Data, Data Curation, Deep Learning, Machine Learning and A.I. driving AchilleS Vaccines development toward DoE, Advanced Project Management methods.

Next Generation Reverse Vaccinology (NGRV) - Auto and heterologous antigen expression, high-throughput immunology, single cell and omics capabilities, analytic vaccinology and immortalized B-memory cell are among the technologies which enable AchilleS Vaccines to run the Next Generation Reverse Vaccinology.

KEY PARTNERING OPPORTUNITIES

- scientific collaboration

BIOSCIENCE RESEARCH CENTER

BsRC performs, research and provides services in the fields of environment, agribusiness and human health. Since its constitution it has consolidated its turnover and increased its workforce by developing new jobs for highly qualified personnel in a growth process that is still underway. BsRC strongly believes in quality and aspires to excellence in the services it provides, as a business card to enter the international market in a competitive way; it is in this perspective that it entered TLS in 2016.

ACTIVITY

Thanks to a staff of skilled and diversified researchers and to the national and international network that it has developed, BsRC offers its customers consulting, technical support, analytical services and training in its areas of expertise, working under a quality system in accordance with the European certification system UNI ISO 9001:2015 and UNI EN ISO 17025:2005 (Accredia Lab. N. 1715L). In particular, the center carries on basic research, monitoring and analysis activities, and consultancy services in the following areas: **Environment Sector** - environmental matrices (water, air, soil, and sediment) and biological ones (animals and plants) in both aquatic and terrestrial environments; **Agribusiness Sector** - food products, food supply chains, and packaging; **Human Health Sector** - food quality, cosmetics, organic or nutraceutical products, medicines, and manufacturing processes. We're specialized in microplastic detection and materials analyses and recently we developed a section specialized to test materials and final products by microFT-IR and to certify both biocompatibility and the compliance to the UN EN ISO regulations for production of DPI for COVID-19 (i.e. masks).

TECHNOLOGY AND PATENTS

Hydro-Kit BsRC (developed for Castalia SpCA) - 2015 - A specific kit customized for the Client to perform in field

easy and fast measurements of physical-chemical parameters on oil-spilled hydrocarbons in water.

Ultrabio App® - A friendly usable and innovative e-tool customized for general people following the dream to improve health, wellbeing, and well aging of EU citizens. Ultrabio App® allow everyone a bottom-up control on chemical intakes from diet and acting to promote a more conscious and healthy approach to nutrition and food quality in Europe.

POTENTIAL (IN 1-3 YEARS)

The company, owning consolidated skills and activities in environmental applications, aims at developing activities focused on ecotoxicology, biomarkers, microplastics & nanoparticles in agribusiness and pharmaceuticals fields separating these lines from environmental and it is looking for investment for this intervention.

KEY PARTNERING OPPORTUNITIES

DICOFARM S.P.A.

Dicofarm, established in 1977 in Rome, is active in four major medical areas: gynecology, gastroenterology, neonatology and pediatrics. Since 2002, with the creation of AG Pharma, has an internal division between AG Pharma and Dicofarm. The company carries out clinical researches on its products and guarantees certified products with international patents and with the approval of opinion leaders and researchers from major universities worldwide.

ACTIVITY

Principal activities are organised on two areas: adult products in gastroenterology, gynecology and urology (AG Pharma) and products focused on pediatrics and neonatology area (Dicofarm). In January 2012 Dicofarm opened a new lab in the TLS incubator with the aim to pursue R&D activities, in the context of anti-inflammatory and immunomodulatory sector, starting from cellular fractions of probiotic bacteria with proven effectiveness.

POTENTIAL (IN 1-3 YEARS)

Innovative products' development for the treatment of viral and bacterial infections.

DIESSE DIAGNOSTICA SENESE S.P.A.

DIESSE Diagnostica Senese S.p.A. is an Italian company with an integrated and entirely inhouse production of in vitro diagnostic systems. Its headquarters are in Siena. Since its foundation in 1980, the company has developed, produced and marketed innovative diagnostic systems primarily in the field of immunodiagnosics and automatic measurement of erythrocyte sedimentation rate (ESR). The company has a global presence in over 100 countries, three production sites and a research centre where the design and implementation of tests and new automated diagnostic detection tools meet Italian design and cutting-edge technology, making DIESSE synonymous with "Diagnostics Evolution".

ACTIVITY

A mainstay of DIESSE strategy is the in-house production of most of the basic biologic components of the diagnostic kits (polyclonal and monoclonal antibodies, native and recombinant antigens), along with the capacity of designing instruments and dedicated plastic devices in order to develop close automated systems.

The R&D division of DIESSE S.p.A. creates diagnostic systems based on the development of biochemical and immunometric assays and instrumentation for the automation of analyses, collection and data processing.

The main activity of DIESSE in TLS is the development of recombinant antigens and monoclonal antibodies to be used in kits for the serological diagnosis of various infectious diseases based on the detection of IgG, IgA and IgM antibodies, and for the direct search for antigens from pathogenic microorganisms in biological samples.

EPIGEN THERAPEUTICS S.R.L.

Epigen Therapeutics is a biopharmaceutical company whose main office is located in Friuli-Venezia Giulia at the Polo Tecnologico of Pordenone (Italy). The company is dedicated to the research and development of therapeutic approaches and innovative diagnostic tools in the immuno-oncology field to be made available to cancer patients. Epigen Therapeutics has a Research & Development Unit at the TLS incubator.

ACTIVITY

Translational skills of Epigen Therapeutics are based on expertise in cancer epigenetics, immunology and immunotherapy. Core activity: to develop and bring to the clinic a proprietary epigenetically-based, autologous, multivalent cellular vaccine for cancer treatment (DeMethAVax).

Other activities: development of pre-clinical (in vitro cell cultures and murine models) and clinical projects in Immuno-Oncology in collaboration with industrial and academic partners; services delivery for: immunomonitoring of cancer patients; epigenetic, phenotypic and molecular analyses of prognostic/predictive biomarkers; scientific consultancy on novel immuno-therapeutic strategies.

TECHNOLOGY AND PATENTS

“Antigen presenting cells, method for their preparation and their use for cancer vaccines” PATENT NUMBER PCT/IT2002/000488.

POTENTIAL (IN 1-3 YEARS)

Develop and bring to the clinic the proprietary epigenetically-based, autologous, multivalent cellular vaccine for cancer treatment (DeMethAVax): GMP validation procedures for vaccine set-up; obtaining clinical transferability authorizations; identification of the proper manufacturing site; first-in-man clinical study development.

EXOSOMICS S.P.A.

Established in 2012 and hosted in one of the largest and more active bio-parks in Italy, the Toscana Life Sciences Foundation. The company is active in the area of Liquid Biopsy in cancer and after several years of R&D work and IP development, is now at commercial stage launching its proprietary and innovative solutions into the molecular diagnostics market. To ensure the highest available quality standards, Exosomics is both ISO 9001 and ISO 13485 certified and GCLP accredited.

ACTIVITY

Exosomics' distinguishing factor is the capability to isolate tumor-derived exosomes through proprietary affinity methods, thus enriching for tumor-derived proteins, DNA and RNA, and therefore significantly improving molecular diagnostics in cancer and allowing early pan-cancer screening. Given that tumor-derived exosomes contain biomarkers identical to those expressed on a cancer cell surface, and poorly expressed in healthy individuals, Exosomics considers exosome-based liquid biopsy as the next generation of cancer diagnostics, which will not only complement but surpass traditional biopsy. The company's mid/long term goal is to develop a pan-cancer test that will fulfill a critical unmet medical need by enabling early screening of multiple cancer types. Exosomics' superior know-how and expertise in Liquid Biopsy has attracted several research groups, both Academic and from Biotech/Pharma, who are using its platform and services to address several relevant questions in diagnostics and new therapeutic development.

TECHNOLOGY AND PATENTS

Exosomics' disruptive technology enables the development of superior quality tumour-derived exosome-based liquid biopsy assays and allow more effective cancer stratification, accurate staging, and earlier detection leading to improved patient outcomes, and understanding the resistance to particular therapy.

Exosomics IP covers the methods to extract high quality plasma and vesicles from blood, the biomarkers used to capture tumour-derived exosomes and the procedures to extract highly relevant tumour-derived information from them.

POTENTIAL (IN 1-3 YEARS)

Exosomics is expanding rapidly both the exosome-based cancer diagnostic and the services to pharma and biotech businesses. While the objective is organic growth, Exosomics is poised for a major acquisition by pharma or diagnostic assay developers.

ITALIAN SCIENTIFIC SOCIETY FOR MEDICAL HEMP (SICAM)

The Italian Scientific Society for Medical Hemp (SICaM) was born in 2017, to become a reference point in the ever-changing national landscape regarding therapeutic cannabis. SICaM is responsible for supporting the spread of cannabinoid-based therapies by promoting a network of health, chemical and agronomic professionals. The company also deals with scientific research regarding the preparation of cannabis-based products and extracts and the agronomic techniques to be applied to the cultivation itself.

ACTIVITY

SICaM provides training and consulting services for pharmacists, doctors and agronomists working in the field of cannabis for therapeutic use. SICaM is also involved in research and development for growers and producers of cannabis-based extracts and preparations, providing advice and analysis services.

POTENTIAL (IN 1-3 YEARS)

Today SICaM has more than 50 associated professionals, including pharmacies and doctors. In the next 3 years the company expects to reach an exponentially higher number and to provide more and more integrated services for training and consulting (webinars, etc.). Furthermore, SICaM aims to formulate standards for both the first and second processing of raw cannabis materials.

KEY PARTNERING OPPORTUNITIES

LEAD DISCOVERY SIENA S.R.L.

Lead Discovery Siena (LDS) is an innovative PMI focused on the research for new drugs and on providing services in drug discovery. LDS was founded as a spin-off of the University of Siena in 2012 to combine the wide scientific background and the entrepreneurship of its management and to offer specific solutions and competences in the small molecule drug discovery area to both academic and industrial partners.

ACTIVITY

LDS is involved in different R&D projects focused on the development of broad-spectrum antivirals for the treatment of emerging viruses.

LDS has:

Discovery&Development activity with Integrated medicinal chemistry services, a wide range of organic synthesis, analytical and biological services and specific expertise in anticancer agent bioconjugation with antibodies;
Research&Development activity with its own project portfolio for oncology and infective indications, including antibacterial, antiviral and antifungal agents, and rare diseases. LDS owns the intellectual property rights for the anticancer and antibacterial compound families. The most advanced project is focused on the development of new drugs for the glioblastoma treatment.

TECHNOLOGY AND PATENTS

Patent 1 New Compounds and Uses Thereof - US, EP, CA, JP pending - LDS property

Patent 2 Methods of inhibiting serum glucocorticoid induced kinase 1 (sgk1) as a treatment for salt and water balance diseases - (submission 2018) - co-ownership with Indiana University Research and Technology Corporation and Università Magna Graecia

Patent 3 Linear guanidine derivatives, methods of preparation and uses thereof - US granted - LDS property

POTENTIAL (IN 1-3 YEARS)

Completing preclinical phase for glioblastoma project (licensee for the project)

Finding a development partner for the antiviral project

Finding new partners for research services

Fulfil services on research projects contracted by third parties

MATERIA MEDICA PROCESSING S.R.L.

Materia Medica Processing is a new company dedicated to the extraction, purification and analysis of hemp. Our mission reflects the increasing need for scientific knowledge in the field of healthcare and wellness products in a market characterised by evolved consumers. Our staff has backgrounds in chemistry and are experienced in pharmaceutical R&D, phytochemical analysis and the purification of natural molecules

ACTIVITY

Materia Medica Processing is devoted to the support and development of standardized processes that hold great technological and scientific value in the field of phytotherapy, with a particular focus on the chemistry of phytocomplexes, including characterization and extraction optimization. The laboratory is fully equipped for the scientific investigation of secondary metabolites and contaminants found in botanical material. Furthermore, Materia Labs is the only dedicated cannabis testing facility in Italy. We monitor every phase of the extraction and purification in compliance with national and international standards: we obtained ISO 9001:2015 and GMP cosmetics 22716: 2008 certifications.

POTENTIAL (IN 1-3 YEARS)

The cannabis industry is one of the fastest growing industries in countries where medical and adult use have been legalized. There is significant space for research, product development and business opportunities, but more importantly there is an urgent and unmet medical need. We are active in processing extracts and in analytical service. We have the potential to fully manage our operations out of a GMP pharma environment.

MICROBIOTEC S.R.L.

A knowledge-based SME founded in 2009, with headquarters in Monteriggioni and Office/Laboratory at the “Toscana Life Sciences” (TLS) Science Park since 2011. Microbiotec is a Start-up company based on the technology and innovation developed at the Laboratory of Molecular Microbiology and Biotechnology of the University of Siena. The company works in the fields of microbial biotechnology, probiotics, vaccines and diagnostics.

ACTIVITY

Current research activities include projects on Microbial Biotechnology with focus on bacterial lysates, probiotics based on Lactobacilli, vaccines formulations and new diagnostics. From 2015, Microbiotec has implemented several methods for transcriptome analysis of RNA Sequencing data for study the human immune response to Ebola vaccine.

Microbiotec has been Partner in many EU Projects as CHAARM (Combined Highly Active Anti-Retroviral Microbiocides), ADITEC (Advanced Immunization Technologies) and MOTIF (Microbicide Optimization Through Innovative Formulation). Actually is engaged in VSV-EBOVAC (Vaccine safety and immunogenicity signature of human responses to VSV-ZEBOV), VSV-EBOPLUS (Systems analysis of adult and pediatric response to the VSV-ZEBOV Ebola vaccine) funded by IMI2 and VacPath (Novel vaccine vectors to resist pathogen challenge) in the Marie Skłodowska-Curie Innovative Training Networks. Recently, the company started the Quality Management Systems and obtained the quality certifications for UNI EN ISO 9001:2015, UNI EN ISO 13485:2016 for Medical Devices and GMP for Dietary Supplements.

TECHNOLOGY AND PATENTS

Technologies include laboratory for bacteriology and biotechnology and basic biochemistry. Other relevant

instruments include a benchtop Lyophilizer and an High Pressure Homogenizer. Computers with appropriate programs are also available for bioinformatics analysis of Next Generation Sequencing (NGS) data.

KEY PARTNERING OPPORTUNITIES

- scientific collaboration

PHARMA INTEGRATION S.R.L.

A start-up born thanks to the highly specialized expertise of Italian professionals, Pharma Integration has as its main objective that of designing and developing cutting-edge systems dedicated to small volume fill-finishing for next-generation drugs. The company, which took up residence in the TLS incubation spaces in July 2015, began the design and prototyping of the new units in 2016 and has an industrial model based on the massive use of new graduates from regional universities, with the goal of becoming a reference center for the training of specialized technicians for the production, control and management of the plants.

ACTIVITY

Pharma Integration designs and integrates systems, instruments and data collection dedicated to injectable products and new drug generation using robots and isolator technology, introducing real innovation on the pharma equipment production chain. The services, technology and production model are offered worldwide.

TECHNOLOGY AND PATENTS

“Constructive structure of a containment, intended for automated production of pharmaceutical or biotechnical articles” - Patent no. WO 2018/109 549.

“Arrangement for the contamination-free introduction of a sterile object from a container into a containment and method therefor” - Patent no. WO 2020/016 645.

PIERRE IMPIANTI

Pierre Impianti is a company that has been offering design, set-up and technical assistance services for chemical and scientific research laboratories, for over 30 years. The company is incubated at the Toscana Life Sciences (TLS) Foundation and it is specialized in the creation of technologically advanced systems and in the setting up field of the layout of the technical furniture laboratory; starting from the study of functionality and equipment, adapted to the specific needs of the customer. The company also offers technical assistance for scientific equipment such as chemical and biological hoods, isolators, incubators and centrifuges. Since its creation, Pierre Impianti has developed a specific know-how in the field of laboratory reconfiguration, in the integrated hi-tech equipment logistics and in the realization of utilities intended to supply new equipment projects.

ACTIVITY

Pierre Impianti makes ordinary and extraordinary maintenance activities and periodic checks of scientific equipment and collective protection devices (DPC), to ensure maximum safety and efficiency of the machineries. Moreover, Pierre Impianti offers periodic equipment sanitization services and workplaces made with: Bioquell technology that use Vaporized Hydrogen Peroxide (HPV); environmental sterilization made through the use of Ozonizers-Ionizers and, it also provides to create sterilization systems by using fixed or mobile systems of germicidal lamps, for rooms that are at risk of biological contamination. Within TLS and its bio incubator, this company oversaw the setting up of laboratories, built inside the “building 36” and in the “MRC building” too. In addition to the general maintenance, it also makes periodic checks and reconfigurations of the technical furniture and all utilities at the service of the companies that are affiliated with the TLS Foundation.

POLO GGB S.C A R.L

Polo GGB is a highly specialized company working in the Life Sciences field to develop and promote Genomics and Genetics services to the academic and public/private sector. The Headquarters and the Genomics & Bioinformatics laboratory are located in Siena, at the MRC of TLS, while Terni hosts an Immunoassay Laboratory and a state-of-the-art mosquito confined-release facility for Ecological and Genetics studies to control vector borne diseases. A team of 17 young and highly-qualified members of staff, mostly PhD researchers, with expertise in different areas represent Polo GGB and its extraordinary environment where it is possible to continuously learn and innovate.

ACTIVITY

The activities of Polo GGB can be classified in two main areas: Services and Research both operating in the Genetics and Genomics fields. The Genomics & Bioinformatics Laboratory is committed to delivering next-generation sequencing services and bioinformatics services for research and diagnostic applications. The laboratory is equipped with the most innovative Next generation Sequencing equipment based on the Illumina and Nanopore technologies and with an outstanding Bioinformatics capability for the processing of biological data. The Ecology & Genetics Laboratory is engaged in cutting-edge research for the control of vector-borne diseases, with a particular focus on Malaria and on the development of genetically modified mosquitoes for its control. Finally, the activities of the Immunoassay Laboratory focus on the production of custom monoclonal antibodies (MAb). The laboratory is also currently involved in vaccine oriented immunological activities that include the development, at prototype level, of diagnostic assays for surveillance purposes.

SIENA IMAGING

Siena Imaging is hosted in TLS since June 2017 when the company was founded as a spin-off of the neuroimaging research group at the Siena University. The idea to start a business based on the high level proprietary technology, was born after more than 15 years of research developed inside the academic laboratories. Founders and shareholders are: Nicola De Stefano full professor of Neurology at the Department of Medical Science, Neuroscience and Chirurgia; Giacomo Demurtas expert in computer science; Marco Battaglini Researcher at Siena University and CEO of the newborn company.

ACTIVITY TIPOLOGY/PRODUCTS/SERVICES

The company offers to neurologists, neuroradiologists, hospitals and pharma companies, quantitative indexes of tissue damage from NMR images of the brain. Moreover customers can get access to dedicated software for monitoring and diagnoses of neurodegenerative and autoimmune diseases like Alzheimer and Multiple Sclerosis. In particular the company is working at the development of a Web 2.0 platform for the centralized analysis of NMR images coming from clinical trials aimed at the measurement of brain damage.

The company develops its software in collaboration with the most important neuroimaging centers in the world like the one in Oxford (UK) and can count on a large network of national and international pharma companies and information technology centers.

POTENTIAL (IN 1-3 YEARS)

- 1) Obtaining the CE and FDA approval to launch of the Web 2.0 platform by 2020
- 2) Reinforce the position of analysis center for phase II-III-IV clinical trials using NMR imaging and increase the number of customers by 2019

TECHNOLOGY FOR ALL - T4ALL S.R.L.

Technology for All - T4ALL is a private company providing R&D and IT solutions in a widespread set of domains, including some relevant socio-economic fields such as healthcare, remote monitoring tourism, cultural heritage and mobile services.

Founded in 2008 as a spin-off company of University of Siena - Dept. of Information Engineering - since 2010 the company has been incubated into Toscana Life Sciences Technological park and since 2018 has been listed in the innovative SMEs' special register, hold by Italian Ministry of Economic Development.

ACTIVITY

The company's key activities refer to two different business units:

The **Digital Health Division** provides solutions for remote monitoring of vital signs and telemedicine, supporting ageing people and patients affected by chronic diseases. The company is also engaged in clinical risk management, addressing secure identification of patients in the hospital setting.

The **ICT Division** promotes the adoption of smart technologies in Web and Mobile service scenarios, with focus on user engagement (proximity marketing, augmented reality, digital storytelling), mobility and sustainable development, Beacon and RF-IId technology and wireless sensor networks.

POTENTIAL (IN 1-3 YEARS)

- Double digit growth in turnover in the last 2 years, the company is gathering new projects and customers to increase market penetration.
- Unique Italian certified distributor of the Laserband solution for patient identification.
- Design of a smart and sustainable platform based on wearable technology to support deaf women in a sound oriented world. The company has designed the

QUIETUDE integrated platform, a collection of interactive jewellery, able to filter, recognise and notify environmental sounds through vibration, dynamic lights and shape changes. By wearing these accessories, deaf women will be able to perceive voices and other sounds through their body.

VisMederi Holding Unipersonale
Date of foundation: 23rd October 2017
Company Size: 2

Executive Administrator: Sara Pugliese
Str. Petriccio e Belriguardo 35, 53100 Siena

VISMEDERI GROUP

VISMEDERI AND VISMEDERI RESEARCH S.R.L.

VisMederi was founded in 2009 from the entrepreneurial idea of its founders who decided to invest their own finances in the Life Sciences field, with particular attention to public health. In 2014, it was established VisMederi Research, an innovative start-up founded to carry out basic and applied research activities on behalf of its parent company, VisMederi. Both companies have consolidated global contacts with corporations and private subjects in the field of influenza vaccines. Moreover, they work through grants from public entities and are supported by a Scientific Committee, led by Prof. Emanuele Montomoli of the University of Siena.

ACTIVITY

Activities are mainly distributed among two divisions in VisMederi: **Vaccine division (Immunological Assessment of Vaccines)** - VisMederi conducts and perfects serological tests to evaluate the immunogenicity of vaccines (mainly against influenza virus, but also against EPI related virus and emerging neglected diseases), creates and validates bioanalytical methods and experimental protocols for the release of vaccines in development phases and performs quality control during the intermediate stages of vaccine production. VisMederi continues to develop and consolidate the main serological tests for the validation of immunogenicity of pandemic and seasonal influenza vaccines, other than to implement its portfolio of service with test able to evaluate the efficacy of innovative vaccine basing on research activity performed by VisMederi Research. Both companies provide support in the design of the study, the monitoring of its performance, data processing, and the preparation of intermediate and final reports according to international guidelines to licence new influenza vaccines or to monitor them during post marketing.

Food, safety and environment division - The division provides consulting services and microbiological analysis in environmental, food and agricultural fields on any type of food, water, soil and work surface. The analysis, carried out with modern and technologically advanced instruments, allows

for the performance of quality controls and verification of compliance to all regulations required by law regarding such matters. Moreover, VisMederi offers safety consulting services which includes risk protection and prevention for activities involving biological agents and health in the workplace.

TECHNOLOGY AND PATENTS

VisMederi and VisMederi Research have access to biosafety laboratories (level 2, 2+ and 3) and to a cell facility. Recently, both companies have implemented their technology platforms with new assays (dosage of IgA flu antibodies, ELLA test, flu pseudotypes, evaluation of cell mediated immunity) and instruments (FACS, ELISPOT/Virosport, RT-PCR, VaxArray, spectrophotometer/luminometer).

POTENTIAL (IN 1-3 YEARS)

To meet the growing request relating to vaccine testing, not only in influenza field but also in EPI related virus, emerging neglected and bacterial diseases, VisMederi and VisMederi Research are prepared to expand the offered services, predisposing both companies to entry in new market segments near that of analysis on influenza vaccines.

VISMEDERI GROUP

VISMEDERI LIFE SCIENCES

Sampling and analysis of water required by current legislation; the analyzes are aimed both at companies that supply water to third parties and to individuals; analysis on food and work surfaces for the purpose of food self-control; analysis on food products to determine nutritional values. We carry out analyzes for the drafting of labels in compliance with European, USA and Canada regulations. Analysis on excavated lands and rocks and soils; necessary analysis to certify the quality of textile materials. We operate in public and private sectors.

ACTIVITY

Water analysis: Verification of chemical and microbiological parameters for accommodation facilities, industrial plants, agri-food companies, catering, school canteens, large-scale distribution;

Surface analysis: Restaurants, bars, hotels and canteens. We also carry out environmental investigations and checks on work surfaces for companies that want to validate their internal sanitization procedures;

Nutritional tables: determine the nutritional values to be affixed on the label indicating the energy value of the product and its composition in nutrients. We carry out analyzes for the drafting of labels compliant with European, USA and Canada regulations.

Environmental analysis: We verify the suitability for use in agriculture by identifying the chemical-physical characteristics and the specific composition. Commercial \ industrial, residential \ public and private green areas and for agricultural use.

Textile analysis: we verify the conformity and quality of raw materials and semi-finished products in the tanning sector with the verification of CITES certificates through DNA analysis.

RESEARCH GROUPS

BIOINFORMATICS LABORATORY, INSTITUTE OF INFORMATICS AND TELEMATICS OF THE NATIONAL RESEARCH COUNCIL (IIT-CNR)

The Bioinformatics Laboratory's research focuses on the development of computational and analytical methods to transform experimental molecular and clinical data into relevant information to improve clinical decision-making in the field of Precision Medicine. The approach is multidisciplinary combining mathematics, statistics and computer science.

ACTIVITY

Researchers have a wide expertise in analyzing high-throughput data (whole and exome seq, RNAseq, small RNAseq), and in developing novel computational methods for copy number variation (CNV) identification from HTS data and their characterization. Further research interests include the study of patient specific tumor heterogeneity; the characterization of the functional role of microRNAs and their regulatory networks in tumor drug resistance mechanisms and in cardiac pathogenesis; the identification of non-invasive biomarkers for therapeutic oncological monitoring and drug resistance.

CENTER FOR IMMUNO-ONCOLOGY, UNIVERSITY HOSPITAL OF SIENA

The Center for Immuno-Oncology (CIO) is a multidisciplinary entity of the Azienda Ospedaliera Universitaria Senese (AOUS), established in 2017 by the AOUS to allow clinical and pre-clinical researchers to operate in a highly integrated, comprehensive scientific environment dedicated to cancer immunotherapy. The CIO has 4 fundamental structural units: the clinical facilities of Medical Oncology and Immunotherapy, the Clinical Research unit for clinical trials, the Translational Laboratories dedicated to the activities supporting the clinical trial programs, and the Pre-Clinical Laboratories dedicated to basic research (located at MRC Building c/o TLS incubator).

ACTIVITY

Main activities of the Center are:

- Clinical and experimental immunotherapy of solid malignancies;
- Immunomonitoring of patients treated within clinical trials of cancer immunotherapy;
- Epigenetic regulation of immune-related mechanisms involved in tumor progression and resistance to immunotherapy;
- Immunomodulatory activity of new epigenetic drugs to identify new partners for immunotherapy protocols;
- Therapeutic efficacy of new bio-immunotherapeutic agents and their combinations to evaluate their anti-tumor activities.

POTENTIAL (IN 1-3 YEARS)

- Identification of epigenetically-modeled, immune-related features underlying tumor progression and metastatization;
- Characterization of epigenetically-sustained mechanism(s) accounting for primary and secondary resistance to immunotherapies;

- Implementation of highly innovative, hypothesis-driven, epigenetically-based, immunotherapy clinical trials in cancer patients;
- Identification of predictive biomarkers in the context of innovative immunotherapies;
- Development of new personalized combined epigenetic-immunotherapeutic approaches.

CERM FOUNDATION (COMPETITIVENESS, RULES AND MARKETS)

CeRM is an independent research center created with the institutional aim at contributing to the enhancement of the technical quality and transparency of economic policy and market regulation decisions.

ACTIVITY

CeRM's studies mainly regard institutional reforms, the modernization of the welfare system, scientific and technological innovation, healthcare and research systems,

the transformation of the labor market, and the design of regulatory structures and governance models with application to the different contexts in which the business activity is carried out.

OTHER INFO:

DEPARTMENT OF MEDICAL SCIENCES, SURGICAL AND NEUROSCIENCES (DSMNC), UNIVERSITY OF SIENA

The Department of Medical Sciences, Surgical and Neurosciences (DSMNC) was born from the desire to aggregate the initial proposal of three Departments of the University of Siena thus favouring a broad aggregation in a context of organic continuity among the Scientific-Disciplinary Sectors. DSMNC promotes teaching and research activities in the Area of Biomedical and Medical Sciences and is an active part of the Tuscany Regional Centre for Precision Medicine (CReMeP).

ACTIVITY

Research activities cross multiple contexts and are aimed at the identification of novel molecular mechanisms of various diseases, including metabolic disorders, endocrine, neurodegenerative, cancer and immune-mediated diseases, as well as at the identification of innovative biomarkers in order to foster a broad development of precision and personalized medicine. The development and implementation of high-throughput platforms for nucleic acid sequencing and analysis and the existence of an advanced high-resolution microscopy image analysis platforms and expertise represent two of the multiple strengths upon which the translational research activities of the DSMCN are based.

TECHNOLOGY AND PATENTS

DSMNC research lab has a strong know-how on the analysis of multiples biomarkers molecules (e.g. small RNAs) from biological fluids in several metabolic/endocrine and

immune-related disease contexts. Researchers of DSMNC have recently developed a standardized platform for sequencing analysis of small RNAs from biological fluids. Moreover, high-throughput molecular solutions (exome, whole genome, microbiome sequencing) have been well established, alongside with a solid expertise in confocal microscopy, whole slide fluorescence microscopy and laser capture microdissection analysis.

LIAISON OFFICE (LO), UNIVERSITY OF SIENA

The Liaison Office (LO) of the University of Siena was founded in 1998 to promote the research activities and the entrepreneurship of students, researchers and professors carried out in university departments through virtuous technology transfer practices. The LO offers a series of services to facilitate new partnerships between academic community and companies, Intellectual Property, licensing activities and the creation of spin-off companies. The LO opened an office at Toscana Life Sciences incubator in March 2008, along with the signature of a TLS - University of Siena collaboration agreement.

ACTIVITY

The Liaison Office promotes and coordinates initiatives between the University and all the players that can contribute to empower the potentials of the University. Among others, it is possible to define four main fields in which the LO operates:

- a. Academic spin-offs and start-ups;
- b. Intellectual property services;
- c. Joint Research Laboratories (JRL);
- d. Education, dissemination and technology transfer.

TECHNOLOGY AND PATENTS

The Liaison Office promotes several projects developed at the University of Siena and its spin-offs in the area of Life Sciences (vaccines, applied immunology, pharmacology, oncology, development of diagnostic tests, genomics), of Medical Devices (rehabilitation and assistive technologies, haptic systems), Information and Communication Technologies (internet of things, software applications), Agri-food (weighted management of the territory, traceability, nutraceuticals, cosmetics, sustainable development), Cultural Heritage (landscape assessment, museum itineraries), and Territory Assessment (geological surveys, environmental analyses). INSTITUTE OF CLINICAL PHYSIOLOGY OF THE NATIONAL RESEARCH COUNCIL (CNR)

The Siena Unit of the Institute of Clinical Physiology (IFC) of the National Research Council (CNR) carries out and promotes activities in the field of Biomedical and Health Sciences focusing on experimental oncology. Its mission is to sustain and promote the scientific and technological research through collaborations among national and international institutions and industrial partners.

ACTIVITY

The Siena Unit of the IFC-CNR is focused on different research projects:

- i) Study of molecular mechanisms controlling cell growth and transformation, mediated by mitogen activated protein kinases (MAPK);
- ii) Study of the role of autophagy in cancer and rare genetic diseases;
- iii) Development of new theranostic approaches to cancer by targeted delivery of active molecules and contrast agents to tumor cells and tissues.

The Unit works in strict collaboration with the Core Research Laboratory (CRL) of the Institute for the Study, Prevention and Network of Oncology (ISPRO). The Unit also carries out activity of tutoring and training for undergraduate, postgraduate and doctorate fellows, collaborating with National and Foreign Universities and participating in project of alternating traineeship (work-linked training).

PUBLICATIONS AND RESEARCH SUPPORT

Research conducted in the Unit is reported in high rated international scientific journals such as *Autophagy*, *JBC*,

Oncogene, *Journal of Medicinal Chemistry*, *Cell Reports*. Support to research is based on competitive grants from Italian and international institutions (AIRC, Ministero della Salute, Regione Toscana, European Joint Programme on Rare Diseases) and from ad hoc funding from private companies. For a complete list of publications and grants please refer to ORCID ID: [http:// orcid.org/0000-0001-8434-5177](http://orcid.org/0000-0001-8434-5177).

POTENTIAL (IN 1-3 YEARS)

- Identification of novel molecular targets for improved pharmacological approaches to cancer.
- Development of improved delivery systems to specifically target tumor tissues.

KEY PARTNERING OPPORTUNITIES

- scientific collaboration
- strategic partnership
- grant search

ISPRO (INSTITUTE FOR THE STUDY, PREVENTION AND NETWORK OF ONCOLOGY)

The Institute for the Study, Prevention and Network of Oncology (ISPRO) is a body of the Regional Health Service whose purpose is to promote, measure and study primary, secondary and tertiary actions for cancer prevention and to organize and coordinate, in synergy with other bodies of the regional health service, prevention, diagnosis, treatment and research in the oncology field.

ACTIVITY

Inside ISPRO, the Core Research Laboratory operates, through different Units located in Florence, Siena and Pisa, with the task of carrying out basic research in cancer and, in particular, in the study of the molecular mechanisms that are at its origins, creating synergies within the regional oncology network. In particular, the “Signal Transduction” Unit is located in Siena and its interests are focused on different research projects:

- i) Study of molecular mechanisms controlling cell growth and transformation, mediated by mitogen activated protein kinases (MAPK);
- ii) Study of the role of autophagy in cancer and rare genetic diseases;
- iii) Development of new theranostic approaches to cancer by targeted delivery of active molecules and contrast agents to tumor cells and tissues.

The “Signal Transduction” Unit works in strict collaboration with the Institute of Clinical Physiology (IFC) of the National Research Council (CNR). The Unit also carries out activity of tutoring and training for undergraduate, postgraduate and doctorate fellows, collaborating with National and Foreign Universities and participating in project of alternating traineeship (work-linked training).

PUBLICATIONS AND RESEARCH SUPPORT

Research conducted in the Unit is frequently reported in high rated international scientific journals such as Autophagy, JBC, Oncogene, Journal of Medicinal Chemistry, Cell Reports. Support to research is based on competitive grants from Italian and international institutions (AIRC, Ministero della Salute, Regione Toscana, European Joint Programme on Rare Diseases) and from ad hoc funding from private companies. For a complete list of publications and grants please refer to ORCID ID: [http:// orcid. org/0000-0001-8434-5177](http://orcid.org/0000-0001-8434-5177).

ITALIAN NETWORK FOR TUMOR BIO-IMMUNOTHERAPY (NIBIT) FOUNDATION

The NIBIT Foundation was established on the initiative of “NIBIT” in 2012, aiming to carry out scientific and research activities in the biomedical oncological sector, with particular but not exclusive regard to applied research in the pre-clinical and clinical fields in cancer bio-immunotherapy. The president of the NIBIT Foundation is Prof. Michele Maio, Director of the Center for Immuno-Oncology at the Azienda Ospedaliera Universitaria Senese (AOUS). The Foundation collaborates with the AOUS and has extensive national and international collaborations with major scientific Institutions and with public and private granting Agencies.

ACTIVITY

Main activities are:

- Design, develop and implement phase I-IV clinical trials
- Coordinate and/or cooperate at multicenter clinical studies
- Promote scientific and educational activities in cancer bio-immunotherapy
- Support basic and/or translational research projects

The NIBIT Foundation also designs and develops national and international scientific educational events in Immuno-Oncology (e.g., Masters, Master-classes, Think Tank, etc.).

POTENTIAL (IN 1-3 YEARS)

Development and promotion of clinical trials of cancer immunotherapy in solid tumors;
Development of technological platforms for translational studies in cancer immunology;
Identification of predictive biomarkers in the context of innovative immunotherapies and biological therapies and

development of new personalised immunotherapeutic approaches;
Scientific advice and support to develop educational activities and international scientific events focusing on clinical and translational activities developed by the Foundation.

KEY PARTNERING OPPORTUNITIES

QUANTITATIVE NEUROIMAGING LAB (QNL)

The Quantitative Neuroimaging Laboratory (QNL) of the University of Siena, founded and directed by Prof. De Stefano during the late 1990', conducts clinical research activity in the field of neurodegenerative pathologies, with specific research projects aimed at the development and application of new neuroimaging techniques.

Over the years, the Laboratory has leveraged on the collaboration of other centres that deal with new aspects of the biomedical research such as the Functional Magnetic Resonance Imaging of the Brain (fMRI) of the Oxford University and the Brain Imaging Centre of the Montreal Neurological Institute - McGill University.

ACTIVITY

The research activity aims at improving the understanding of chronic neurological diseases through an improved ability in important biomarkers quantification of global and focal brain damage. In particular, the laboratory activity has been focused on the development of new tools for the quantification of structural damage and the application of the more advanced techniques for the assessment of functional and metabolic damage.

Examples of the fruitful collaborations engaged by QNL with Oxford University is the creation and validation of SIENA (Structural Imaging Evaluation of Normalized Atrophy), a worldwide spread software for the quantification of percentage brain volume changes over time.

UMBERTO DI MARIO FOUNDATION (FDM) ONLUS

The Umberto Di Mario Research Foundation, based in Rome and Siena, works in the translational medicine arena, and in particular in the treatment of diabetes, including rare forms of childhood diabetes. The Foundation, assisted by an International Scientific Committee, promotes and supports excellent research projects and other initiatives (fellowships, workshops, meetings etc.).

ACTIVITY

The specific interests of the Foundation include diabetes mellitus, chronic inflammatory diseases and immune-mediated diseases, in addition to tumours of the nervous system. The Siena-based group is composed of 5 researchers under the scientific coordination of Prof. Francesco Dotta, Full Professor of Endocrinology at the University of Siena.

The Foundation participates in national and international research networks supported by institutions including the European Commission, the Juvenile Diabetes Research Foundation, the Italian Ministry for Research and the Italian Ministry of Health.

TECHNOLOGY AND PATENTS

Umberto di Mario Research Foundation researchers developed standardized protocols for high-throughput identification of novel human blood circulating biomarkers molecules (small non-coding RNAs), multiplexed imaging fluorescence analysis and microdissection of human tissues, and molecular biology assays to evaluate the role of microRNAs in diabetes mellitus, both as disease biomarkers and as determinants of diabetes-associated pathogenic mechanisms.

Umberto di Mario Researchers in collaboration with University of Siena and University of Leuven patented a set of plasma-circulating microRNAs whose expression is

able to predict the success of an autoantigen specific-based therapeutic approach in autoimmune diabetes.

POTENTIAL (IN 1-3 YEARS)

Discovery of novel diabetes biomarkers; identification of innovative therapeutic targets in diabetes. fosters new collaborations in diabetes and translational/precision medicine.

AFFILIATED COMPANIES

BBA SRL - BESPOKE BIOTECH ADVISORY

Bespoke Biotech Advisory, <bba>, is a strategy consulting company targeting the Life Sciences.

<bba> provides entrepreneurs or decision makers with expert guidance in key decision areas, covering the value chain from the go-to-market to the international development

Its business model combines a core of experienced partners with equally experienced business partners, specialising in every single step of the product as well as company's life cycle.

This ensures a flexible response and the right seniority to the customer's specific needs

ACTIVITY

The <bba> method "DESIGN-DELIVER" is perfectly suited to SMEs, companies undergoing renewal, expanding enterprises, small product-making companies, start-ups and all investors needing industry-specific expertise to make targeted, informed investments.

BBA helps customers through transformation, transition or growth towards Digital Biotech and Personalised Medicine by helping them develop strategies with business models that use digital technology, all supported by Design Thinking and Service Design.

To this end, a Trust of Companies specializing in key digital topics concerning Big Data has been established. Operating under the brand name DVA (Data Value Alliance), it provides skills that range from scientific data management to system architecture, from the application of AI to blockchain technology, from Augmented Reality to Virtual Reality.

The <bba> main areas of expertise are: Biotech products and ancillary Services, Digital Health, Diagnostics, Vaccines and Infective Diseases, Precision Medicine, Nutraceuticals and Cosmeceuticals; Strategy (definition and execution, including the most appropriate digital strategy), Marketing and Sales, M&A, Fund Raising

BIOMVIS S.R.L.

BiOMViS Srl is a Biotech Company founded in 2018 to foster prophylactic and immunotherapeutic interventions in infectious diseases and cancer.

ACTIVITY

The Company has two main focuses:

Development of innovative OMV-based vaccines against infectious diseases and cancer

OMVs are closed spheroid particles released by Gram-negative bacteria which are particularly attractive as vaccine platform. BiOMViS' technology of OMV engineering and preparation is particularly attractive for both anti-microbial vaccines and personalized cancer vaccines.

High-tech research services in Vaccinology and Immunology

BiOMViS Srl offers external partners highly qualified services in several research areas, including molecular and cell biology, microbial fermentation and cell culture, protein purification, immunological assays (ELISA, T cell analyses), FACS, confocal microscopy and models of infectious diseases and cancer.

TECHNOLOGY AND PATENTS

BiOMViS has a solid know-how on the OMV vaccine platform and in particular on the synthetic biology strategies to be used to decorate OMVs with foreign antigens. Several innovating engineering approaches have been developed to deliver and compartmentalize heterologous antigens/epitope in OMVs.

BiOMViS has developed and is the owner of a unique *E. coli* strains that release high quantities of OMVs deprived of «unnecessary» endogenous components that might either “dilute” or “impair” immune responses against target antigens.

A large body of data have been generated demonstrating the remarkable immunogenicity properties of the engineered OMVs.

BiOMViS has set-up methods for OMVs production, purification and characterization.

POTENTIAL (IN 1-3 YEARS)

BiOMViS is ready for Phase/II clinical trials with:

1. Viral vaccine: SARS-CoV2 OMV based vaccine
2. Two different OMV based bacterial vaccines against *Staphylococcus aureus* and *Group A Streptococcus*
3. A personalized cancer vaccine

A number of Research Contracts have been already finalized and others are foreseen for the next two years.

BIORIDIS S.R.L.

BIORIDIS is a biotech, founded in Bologna in 2016. BIORIDIS' objectives is development, production and marketing of innovative kits for nucleic acid (DNA, RNA) detection for R&D and diagnostics application. BIORIDIS has managed to break the current technological barrier and develop, in the last 4 years of high-risk research, a revolutionary assay for nucleic acids analysis: the LIVELMIA method.

ACTIVITY

From LIVELMIA method we have developed the Power Marker kits, quick and easy assay for nucleic acids detection. Power Marker kits are designed to work directly on the sample, no extraction/purification steps are required. EV Power Marker is a kit for in vitro detection and quantification of RNA and DNA. Mir Power Marker is a kit optimized for in vitro detection and quantification of miRNA. Bioridis developed a software for rapid design of kits for target NA with advantage of LIVELMIA. We offer a personalized service on the NA target requested by the customer.

TECHNOLOGY AND PATENTS

The novelty of the LIVELMIA method is a new target recognition system based on a specific probes design, which exhibits ideal characteristics to hybridize target NA more rapidly, with higher affinity and specificity, improving the recognition of NAs. LIVELMIA method has been successfully tested on various types of samples (cell lysate, serum, plasma and saliva). Total time for analysis 1h and hand-on <10min.

The LIVELMIA, innovative technology for nucleic acid analysis is owned by BIORIDIS, it is Italy patent granted, PCT positive report, EPO, USA, China and South Korea pending.

EGOHEALTH

egoHEALTH is a start-up focused on the development, production, engineering and scientific marketing of innovative products and services with a high level of technological content, particularly in the field of UV and near-UV light disinfection. It operates in the bioengineering and biomedical informatics sectors, primarily with proprietary and patented technology.

egoHEALTH also performs activities for the promotion and conduction of research and development programs in the field of education and Public Health.

ACTIVITY

egoHEALTH figures have technical and scientific expertise that allow to assist Companies from their idea, up to the pre-industrial production of devices in the field of the disinfection. The multi-dimensional approach characterizes the operandi strategy because of competencies in engineering and re-engineering, fluid-dynamics studies, mechatronics, prototyping, photometric measurements (also with innovative sources of light) and microbiological tests. All the expertise is matched to assist and produce scientific documents experimenting in lab and real environments.

The company has developed several products in the field of disinfection. In particular, the Stet Clean family, multi-awarded and internationally recognized, is an innovative UV-C LED device that prevents cross contamination between patients disinfecting the stethoscope membrane.

TECHNOLOGY AND PATENTS

Device for the hygienisation of medical instruments (IT0001416112, US9114184; India pending); Device for the hygienisation of medical instruments, Device for the sterilisation of stethoscopes (IT0001424711, EP3164161, CA2954129, US 10,226,542, JP6553100, AU2015283749, Corea 10-2017-7000777 pending); Device for the

hygienisation of contact lenses (IT102015000049940);
Dispositivo di disinfezione (IT102020000013072 pending);
Lampada igienizzante (IT102021000001538 pending).

POTENTIAL (IN 1-3 YEARS)

Milestones: finding a partner for developing projects in the field of personal Hygiene; Evolution of STET CLEAN family; projects focused on air, surfaces and liquids disinfection.

EUROPEAN NETWORK OF IMMUNOLOGY INSTITUTES (ENII)

The European Network of Immunology Institutes (ENII) was founded in 1985 by 15 European Institutes devoted to research in molecular and cellular immunology.

The mission was to promote the quality of education and research in the field of immunology through scientific exchanges between laboratories and Research Centres belonging to European countries.

Since March 2018, ENII has the administrative headquarters at the TLS bioincubator.

The commitment was to create a European Network of Excellence and organize annual activities on the small island of Les Embiez, in the south of France, where initially was based. In 2006 the ENII activities were relocated to another island, Sardinia, in Italy. The Faculty Members of ENII Summer School are prestigious scientists and immunologists, including 3 Nobel Prizes.

ACTIVITY

Presently, the ENII Institutes are 31 European Research Departments located in Belgium, Finland, France, Germany, Ireland, Israel, Italy, Norway, Portugal, Spain, Sweden, Switzerland, The Netherlands, United Kingdom.

ENII has organized 21 annual workshops (1986-2006) and 3 EMBO Conferences (2007-2009-2011) on Molecular and Cellular Mechanisms of Immune Regulation.

Since 2006, under the direction of Prof.ssa Paola Ricciardi-Castagnoli and of the general manager Erica Lomnes, ENII organizes every year the Summer School dedicated to 100 European students aiming at promoting the discussion on cutting-edge topics in the quickly developing field of immunology with specific interest on the mechanisms that regulate immunity.

For over 30 years, ENII aims to promote the quality

of European education and research in immunology by fostering scientific information exchanges through scientific educational activities and by creating an European network (ENII Alumni) through international mobility of scientists and researchers.

GENOMEUP S.R.L.

GenomeUp s.r.l. is an innovative startup founded in the 2017 to develop bioinformatics solutions and innovative digital services with high technological value for health, diagnostic and scientific research purposes. GenomeUp s.r.l. is developing a intelligent digital ecosystem as well as applications to increase and facilitate the acquisition, retention and commitment of rare genetic patients.

ACTIVITY

GenomeUp makes the potential of AI accessible for the development of precision medicine in the diagnosis and therapy of rare genetic diseases. We support the clinical decision for an accurate treatment of the rare patient in his diagnostic path and to guarantee the best clinical outcome. Genomics and omic sciences are responding to the most difficult problems of human health conditions and are giving new hopes to people around the world. With GenomeUp we offer an ecosystem of digital services to support scientific, diagnostic, clinical and pharmaceutical research, for doctors and rare patients towards a path of awareness, management, monitoring and healing.

TECHNOLOGY AND PATENTS

GenomeUp developed JuliaOmix™, a solution for the all stakeholders involved in the diagnosis journey: physicians and genetics biologists. JuliaOmix™ works with two smart tools, the JOMed and JOLab, to collect the all patients health data (symptoms, drugs treatment and phenotypes) and combines them with the patient's omics data (whole genome, exome and microbiome), providing a digital in-cloud interactive clinical interpretation and report of genomic variants. GenomeUp standardise the daily disease management workflow to offer a novel approach to patient diagnosis. The SaMD platform is licensed on an annual renewable basis to hospitals and genetic laboratories companies, providers, research and government organisations. It is privacy compliant (GDPR), available in italian and english, and can be easily integrated with other offerings and white-labeled.

INNBIOTEC PHARMA S.R.L.

Innbiotec Pharma researches and produces innovative biomedical solutions for people's well-being. Spin-off of the Department of Biomedical Sciences of the University of Florence, the company exploits technologies developed in over 20 years of research. The two main biotechnologies used by the company are bioavailable glutathione and oleuropein, molecules with strong antioxidant and anti-inflammatory properties, which form the basis of the formulations used in the company's research and products.

ACTIVITY

After years of development with its own internal team and in collaboration with Italian and international universities, Innbiotec is now structured in two divisions: R&D and Commercial. R&D studies high-impact pharma applications of the company's molecules, and takes them through testing for approval and distribution. Fields under study include: neurodegeneration (Alzheimer), liver diseases (NASH) and advanced respiratory diseases (ARDS). The retail firm sells over-the-counter nutraceutical food supplements for health, metabolism and sports, as well as dermatological/skincare products.

TECHNOLOGY AND PATENTS

The company holds over 18 patents, including:

1. New s-acyl glutathione derivatives, synthesis and use in treatment of cellular oxidative stress related pathologies.
2. Pharmaceutical composition containing glutathione thioesters to increase longevity.
3. Method and kit for rapid determination of total antioxidant capacity in whole blood and other biological samples.
4. Use of Oleuropein and its derivatives for type 2 diabetes treatment and diseases associated with protein aggregation.
5. Pharmaceutical composition for the prevention and treatment of age-related memory and cognitive deficits.

INNOVATION ACTA

Innovation Acta is focused on support in planning and execution of EU funding research programs. We support private and public organizations as well as individual researchers and SMEs to participate in multi-national collaboration projects or other grant opportunities. The first step of our mission is to assist our Clients in the preparation of project applications: we start with the identification of an appropriate financing strategy through the establishment of a successful consortia, then we organize the writing of the proposal and finally we take care of the formal submission of the project. In the second step our aim is to contribute to the management, to assist the consortium for all administrative aspects, for the communication and the dissemination of the project.

ACTIVITY

Our Services are:

FUNDING STRATEGIES - searching for the best financing strategy suitable for your project. Helps you find the right partner for Consortium Construction also considering own database of High-Level contacts in scientific field.

PROJECT MANAGEMENT - support in the organization and writing of the proposal and care of the formal submission of the proposal. Once granted, our aim is to support the management, the administrative issues, the progress reports preparation and submission . Legal assistance (grant agreements and consortium agreements preparation, Amendment Ethical Issues).

COMMUNICATION & DISSEMINATION - support the Coordinator in the Communication and Dissemination activities of the projects. Thanks to a competent and qualified staff we support the Consortium during the life-cycle of the project to achieve the following objectives: to communicate and disseminate the project results to a large audience and potential users (clinical/scientific community, general public and patients); to facilitate and promote

interaction with stakeholders (like patients and their families, clinicians and regulatory agencies etc.). Innovation Acta also creates the visual identity of the projects including web design (graphics material and contents), implements project websites, as an information tool with a public facing section and a private section, and creates and manages the Social Accounts, using news and contents provided by all the consortium's partners.

MEETING & EVENTS ORGANIZATION -

organization of meetings, scientific events and congresses, from strategic planning and on through coordination, operations, on-site management, evaluation and subsequent follow-up.

KW APPARECCHI SCIENTIFICI

KW Apparecchi Scientifici srl (Scientific Instruments) is operating since 1953 in Siena, where has started the production of -80°C ULT freezers in the early 1960s, needed for the Sabin polyhemolytic vaccine. Today KW is the first supplier of cold chain devices for Italian National Healthcare System and exports its devices in over 80 countries worldwide. KW collaborates with universities, high schools and research centers for product optimization and for the development of innovative projects.

ACTIVITY

The continuous R&D activities let it to operate in the engineering and manufacturing of a wide range of products with operating temperatures between -125°C and +300°C, equipped with smart connection for integrated solutions, according to IoT/Industry 4.0. The numerous Italian and international certifications, including medical devices, are the result of the commitment to satisfy even the most demanding customers.

The devices are designed to satisfy the most demanding requirements of Research Laboratories, Pharmaceutical Companies, Hospitals, Analysis Laboratories, Bio Banks and more.

The production is focused on a wide range temperature of plug-in devices, installations and special projects designed as unique solution for special applications. With concern to the medical sector, KW is one of the largest Italian manufacturers of medical devices (CE Class IIa and Class I) for blood banks and transfusion centers. All the products are GMP compliant.

TECHNOLOGY AND PATENTS

The most important product lines are:

ULT Freezer -86°C, cascade system with pure gases;

recognized among the highest quality / low energy consumption ratio in the market.

Biological Bank® (registered trademark by KW), with two independent refrigerating systems operating alternately to ensure the -86°C preservation in case one of the two systems fails.

Medical devices for the management of blood and its derivatives: shock plasma freezers, plasma storage freezers (-80°C/-20°C), plasma thawers, platelets incubators and agitators. **The thawer is covered by European patent (Registration N° EP2510965) for plasma and staminal cells thawing.**

The traceability of all the process is possible by an innovative HMI and a complete connectivity with the BAS.

High stability and uniformity of the temperature is guaranteed thanks to the heavy technology research.

POTENTIAL

The Biobank sector is the new goal for which KW wants to become a landmark.

KW is growing and is expanding the production site to increase the production of 50% to satisfy the global needs and to let the production of special products for new different applications.

LABORATORI ALIVEDA SRL

Laboratori Aliveda, was established in 2013 in the countryside of Pisa, as a small manufacturer family company with the passion towards natural health products. The company develops, produces and commercializes food supplements for psychophysical well-being and quality of life improvement. Over the years, the company has grown a lot, up to a significant breakthrough in 2018 with the inauguration of a new advanced production facility developed to provide customers with higher quality standards and advanced production technologies. The manufacturing site is HACCP certified, and the management system is ISO 9001/2015 certified.

ACTIVITY

The strength of the company is certainly the ability to manage the entire production process of natural food supplements: research and development, formulation, production, quality control and marketing; However, R&D remains the corporate asset that distinguishes it and represents its growth engine. As a matter of fact, Aliveda stably collaborate with the University of Pisa, supporting young researchers, and developing projects for in vitro, in vivo and multicentre clinical trials, especially in neurological field.

TECHNOLOGY AND PATENTS

Thanks to ongoing research, Aliveda developed two patents obtained in Italy: the first, a patent concerning a production technology that greatly improves the absorption, protection and bioavailability of important active ingredients and the other, a formulation patent, to increase the expression levels of sirtuin I, which has allowed highly innovative products to be placed on the market.

LIQUIDWEB S.R.L.

Liquidweb is an ICT company focused on Artificial Intelligence (AI) applied to human-computer interaction (HCI). The company believes that HI-TECH innovation should improve the quality of people's life. Starting from this belief, Liquidweb has developed BRAINCONTROL (class I medical software - CE certification), an augmentative and alternative communication software based on AI to support interaction through bio-feedback enabling people with severe disabilities to interact with the outside world. The uniqueness and potential of the software allowed the company to win the Horizon2020 call for tenders, issued by the European Union, which provides non-repayable funding.

ACTIVITY

BrainControl provides three different solutions aimed at people suffering from pathologies such as Amyotrophic Lateral Sclerosis (ALS), Multiple Sclerosis, quadriplegia and various kinds of muscular dystrophies. Our solutions help people to overcome severe physical and communicative disabilities.

BrainControl BCI AAC. Profiting off Brain-Computer Interface and thanks to an EEG headset, the device allows people with severe disabilities (also in LIS/C-LIS) to interact with the outside world using their thoughts.

BrainControl Sensory AAC. Thanks to a grid of sensors, the device exploits the patient's residual movements (eye, hand, finger, cheekbone movements, etc.) to interact for communication and entertainment.

BrainControl Avatar. These interaction methods allow to drive from remote a robotic avatar to enable virtual visits to exhibitions, museums and other spaces.

TECHNOLOGY AND PATENTS

Patent 1: IT102015000052009 (IT) 15/09/2016 - 23/03/2017

Patent 2: Application EURO-PCT (EURO-PCT) 13/09/2016 - Pending

Patent 3: Application JP (JP) 14/03/2018 - Pending

Patent 4: Application USA (USA) 16/03/2018 - Pending

Patent 5: Application Cina (Cina) 15/03/2018 - Pending
Patent 6: Application Canada (Canada) 13/04/2018 - Pending

POTENTIAL

Our next goal concerns the improvement and promotion of the solutions we offer to become a point of reference in EU and USA markets. In the meantime, new products and services, covering other fields, are under development. These include the planning and production of devices for cognitive and consciousness assessment. To reach these goals the company has been planning to significantly increase our research team and implement new projects with professionals, hospitals and universities.

KEY PARTNERING OPPORTUNITIES

- scientific collaboration
- strategic partnership
- investment opportunity
- grant search

OTHER INFO:

Date of foundation: 2010
Company Size: 8 employees

NEXID HEALTH

NEXID Health is born in January 2019, as the Healthcare Division of NEXID company, to verticalize in the healthcare market the Company's technological skills. From March 2020, NEXID Health is an independent company of the NEXiD Group. In April 2021 **NEXiD Health** obtained ISO9001 certification. Our Mission is to contribute in breaking down the technological barriers to the development of personalized medicine, focusing particularly on the problems of architectural interoperability and harmonization of clinical data.

ACTIVITY

NEXID Health is currently providing 3 different services: Collection of health data, Interoperability of health data and Data Preparation, Advanced Analytics. **NEXiD Health** provides consulting services in the Healthcare ICT sector related to Health Technology Assessment, cybersecurity consulting services, deep learning algorithms and integration with regional and central services. We are Golden Deployment Partner and System Integrator of the **Nu Platform** from Nuvyta, an innovative clinical collaboration system able to build up a wide range of clinical data management scenarios ranging from complex Electronic Medical Systems to Randomized Clinical Trials. In addition we are deploying the Data Preparation and Advanced Analytics from OKKAM, a semantic web-derived platform for healthcare data harmonization and cleansing as well as a disambiguation system for Personae, Procedures, Events, and Clinical Observations. Moreover, we are a consulting firm specialized in Healthcare ICT, Interoperability and Medical Workflows.

TECHNOLOGY AND PATENTS

NEXiD Health is a Golden Partner of Nuvyta Srl and has several people certified on the **Nu Platform**. As System Integrators and Consulting firm we have a deep experience on the healthcare standards and frameworks such as HL7 3.0, HL7 FHIR, IHE, DICOM using frameworks and tools such as:

- Firely
- SMILE CDR
- Dcm4che DICOM

Our goal is to be a partner that supports healthcare enterprises to face the revolution of Personalized Medicine by promoting the Analytics capacity, focusing on architectural interoperability and harmonization of clinical data, all this in the wake of a potential explosion of information sources such as phenotypic data, omics and any "exposure" data (Exposome) such as climate, pollution, socio-economic context, schooling, etc.

POTENTIAL (IN 1-3 YEARS)

Completing projects on clinical data management
Finding new partners for research services
Fulfill services on research projects contracted by third parties

KEY PARTNERING OPPORTUNITIES

- scientific collaboration
- strategic partnership

OTHER INFO:

Date of foundation: 03/03/2020
Company Size: 10 employees (July 2020)
2021 Projected turnover: €750,000,00

PHARMASI S.R.L.

PharmaSi, a company specialized in the field of food supplements, was born from the passion and experience of a group of professionals from leading pharmaceutical companies.

ACTIVITY

The main activity is focused on the creation and sale of nutraceutical products. List: **TIGER** (Adjuvant in the treatment of hypercholesterolemia and Hyperomocystinemia Prevention of cardiovascular risk); **PROSTASI** (Adjuvant in the treatment of benign prostatic hypertrophy); **LITOCALC** (Natural solution in the treatment of kidney stones); **MAGNESIO** (States of asthenia Fatigue, Cramps, Contractures, Tone of Mood, Prelast Syndrome); **MELURESIO** (Natural solution to recurrent urinary infections); **VENERA** (It intervenes on the venous circulation, on the functionality of the microcirculation and on the drainage of body fluids); **KATARSI** (Adjuvant mucoregulation with fluidifying effect); **POLARIS** (Useful to counteract oxidative stress during pregnancy); **RELAXSI** (Adjuvant for sleep disorders such as difficulty falling asleep, jet lag; Anxious syndrome); **DYNAMO** (Useful in states of fatigue and convalescence, increased energy requirements, sports performance); **OMEGASI** (Adjuvant in the treatment of hypertriglyceridemia).

POTENTIAL (IN 3 YEARS):

150% growth.

KEY PARTNERING OPPORTUNITIES

- scientific collaboration
- strategic partnership

SATUS S.R.L.

Satus is an operating company of Monte dei Paschi di Siena Foundation (FMPS), active in the field, among others, of scientific and technological research.

ACTIVITY

Satus acts as a partner, acquiring shares of start-ups that conduct research in the field of high innovation, including the biomedical, pharmaceutical and biotechnological industries.

POTENTIAL (IN 1-3 YEARS)

In the next three years, Satus is expected to expand its field of action, becoming a sort of revolving fund for companies with a high potential for innovation, established in the reference territory of the Foundation.

KEY PARTNERING OPPORTUNITIES

- strategic partnership
- investment opportunity
- grant search

UBT SRL SB (Umbria Bioengineering Technologies)

UBT SRL (Umbria Bioengineering Technologies), born as academic Spin Off of the Department of Physics and Geology of the University of Perugia, Italy, is a biomedical company which develops and commercialises a portfolio of innovative medical imaging devices based on cutting-edge microwave technology instead of dangerous ionizing radiation (X-Rays).

ACTIVITY

UBT has so far developed two different products, which present unique selling propositions (USPs):

A) MammoWave ; a novel X-rays free mammogram for breast cancer screening. MammoWave recently got CE Mark approval and ISO 13-485.

USPs are

USP1: The absence of harmful radiations enables more frequent screenings to a wider population, including young women.

USP2: the breast is not compressed as it is in mammography.

USP3: excellent engineering solution / price-competitive

B) BrainWave. a novel device for Brain stroke detection and classification. The device is a handy and mobile apparatus that fits into the ambulance setting, allowing examinations prior to the arrival to the hospital.

TECHNOLOGY AND PATENTS

MammoWave's imaging technique employs low power (1 mW) microwaves in the 1-9 GHz band. The device contains two antennas, which illuminate the breast using electromagnetic fields in microwave band and measure the correspondent scattered electromagnetic fields.

The screening takes five minutes per breast and is performed with the patient lying in comfortable position. The technology patented in EU, CHINA, and USA is based on the exploitation of dielectric properties of human tissue, as the contrast between normal/ malignant tissues at microwave frequencies is captured and depicted in the final image, allowing breast cancer detection with accuracy >90%. If augmented by AI, we achieve accuracy >98%.

KEY PARTNERING OPPORTUNITIES

- scientific collaboration
- strategic partnership
- investment opportunity
- grant search
